

subject matter ranges from catalyst preparation to sustainable energy and from bio-based materials to smart textiles development.

All the topics are drawn together by being relevant in some way to sustainable development, whether it is *via* the more efficient use of natural resources, working towards the transition to a zero carbon economy or by creating a better understanding of materials and processes that will enable future research in these areas.

The contributors to this issue are to be celebrated for their diverse approaches to the common goal of science for a world that's cleaner and healthier, today and for future generations.

A New Look for the Journal Website

Look out for a refresh of the journal's website which is coming in 2022. There will be a new look and feel with new functionality to help you find, download and share the articles from both current and past issues.

In addition, articles will be marked with their peer review status and article history. Peer reviewed articles will display the dates when the article was received at the Editorial office, when revisions were received in response to the referees' comments, when the manuscript was accepted and when it first appeared online either as an advance article or
